CRISP Services Overview

Chesapeake Regional Information System for Our Patients

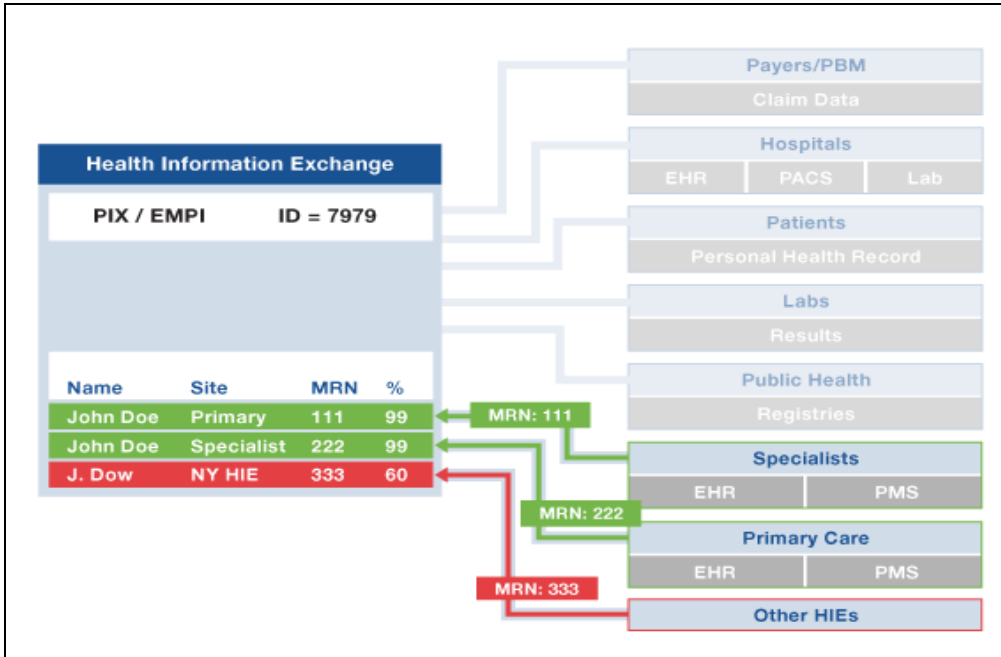

CRISP Infrastructure

Patient Identity Management

Chesapeake Regional Information System for Our Patients

The Challenge:

Accurately and consistently linking identities across multiple facilities to create a single view of a patient.

A near-zero tolerance of a false positive match rate with a low tolerance of a false negative match rate.

Effective Master Patient Indexing is a foundational concept to any population health-oriented or cross-entity payment or delivery reform initiatives.

Reporting Background

Chesapeake Regional Information System for Our Patients

- CRISP receives real-time encounter messages (called “ADTs”) which carry facility, medical record number, visit IDs, and other important information about visit.

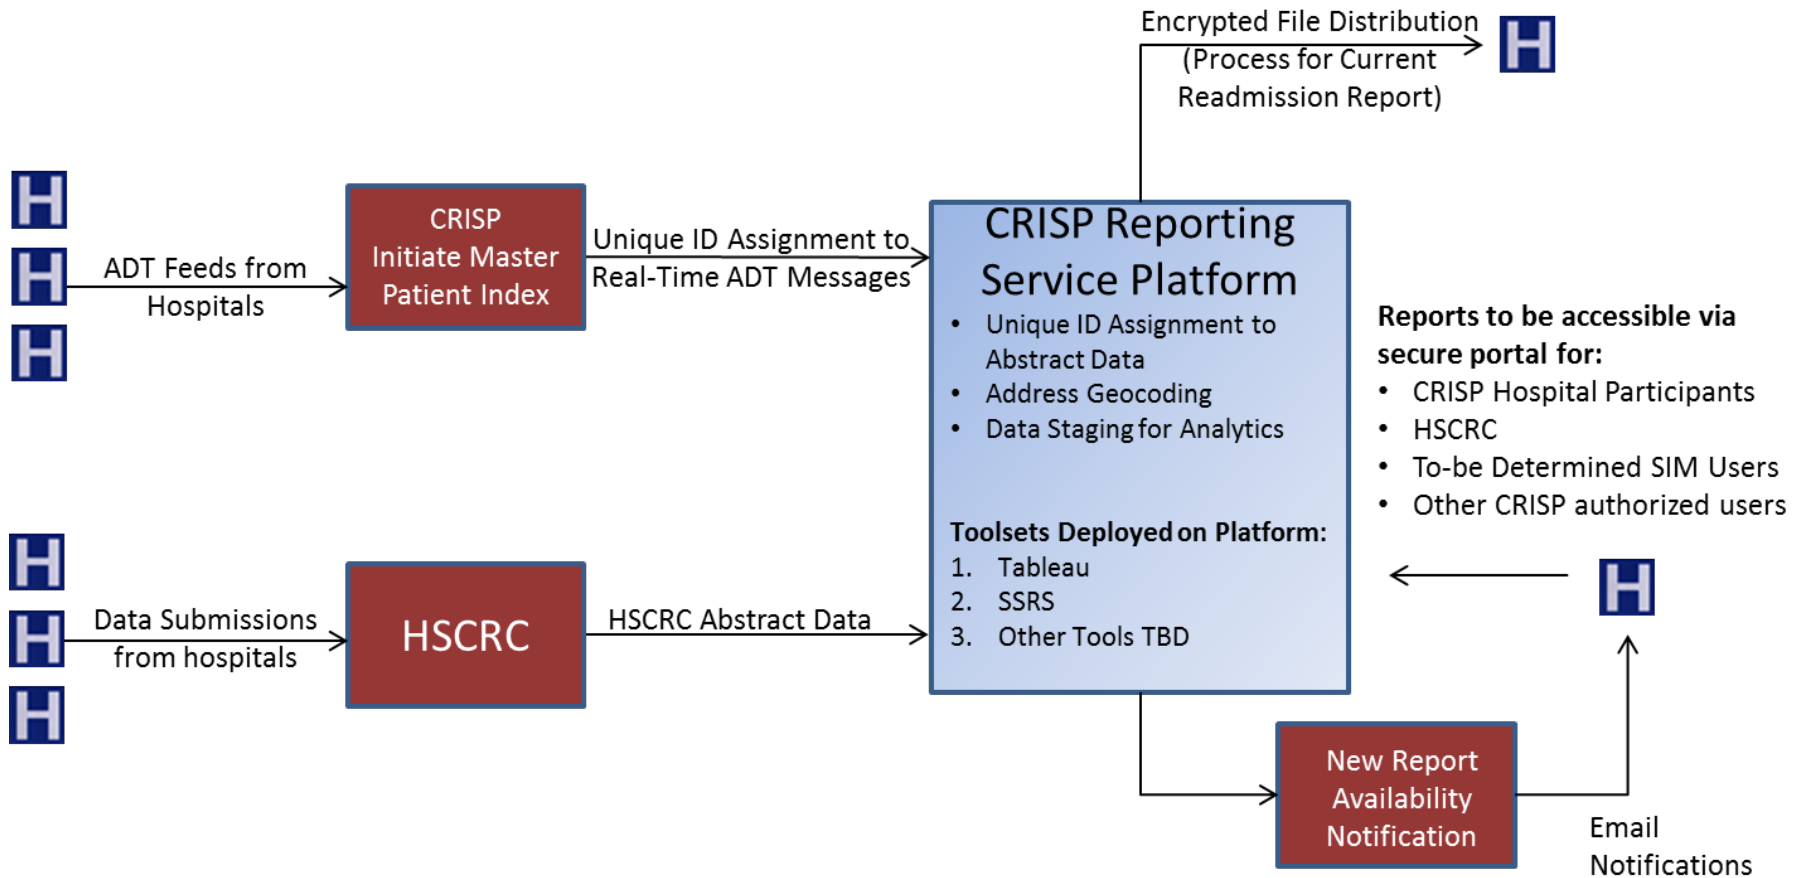

- Unique Aspects of ADTs:
 - Enable population-health analysis (unduplicated users across hospitals)
 - Real –Time data flows
 - Street address, enabling more granular level of geographic analysis

- Linked ADT and HSCRC Abstract Data enables cross-entity and geographically granular analysis

CRS Basic Design

Chesapeake Regional Information System for Our Patients

Reporting Capability - Sample Reports

Chesapeake Regional Information System for Our Patients

CRISP has developed the capability to generate reports through a combination of CRISP data and HSCRC tape data. Initial report ideas include:

Readmission analysis reports

- Monthly reports with patient drill downs
- Year-to-year and monthly
- By hospital, zip, region, county, HEZ
- by diagnosis or disposition

Patient attribution analysis

- based on prior visits
- identify exclusive patients and % of visit allocation by patient
- by census tract or neighborhood
- by diagnosis and charges

High utilization analysis

- by # of visits, LOS, date, overlap, etc.
- by census tract or neighborhood
- by diagnosis, disposition, or charges

Hospital Utilization by diagnosis, disposition, charges using HSCRC data

- County reports (patients, discharges, readmits by diagnosis)

Market share analysis

- Clinical service line utilization by hospital
PSA
- by majority of inpatient visits, total visits, etc.
- by diagnosis and charges

Analysis of Potentially Avoidable Volume

- Visits with ambulatory sensitive conditions
- Readmission
- Market share shifts

Episode of Care analysis

- all subsequent hospital visits after discharge
- by diagnosis or disposition
- by census tract or neighborhood

Uncompensated Care/ACA Impact

- Using CRISP EID to link insurance status and UCC use across time periods

Upcoming Changes to our Readmission Report

Chesapeake Regional Information System for Our Patients

- Historically, our readmissions reports have relied on “basic” inter-hospital readmission logic using ADT data. This allowed hospitals an early view of inter-hospital readmissions.
- We are currently aligning our logic to exactly match the logic HSCRC will use to measure readmissions, including:
 - Using tape data visits (vs. real time ADTs)
 - Using same exclusions as HSCRC.
- CRISP will offer several reports of Intra-Hospital and Inter-Hospital readmissions to help track performance:
 - Monthly trend w/Medicare FFS
 - Statewide comparisons by clinical service line
 - Monthly MRN drill down (shown here)

CRISP Basic 30-Day All-Cause Readmissions From
Target Hospital
November 2012

776 Total Discharges 11/01/2012 - 11/30/2012
