

Amalgamation of Principles to Drive the Delivery and Finance Progression

Care Delivery and Financing

Person-Centered: Tailoring care to persons' needs. Shared information, collaborative care coordination.

Value-Based: Movement from volume-based care to value, incremental movement towards financial and outcomes responsibility shared by all stakeholders – payers, providers, individuals.

Competition: Health competition based on patient satisfaction, quality, outcomes, and cost of care.

All-Payer: Hospital initiatives continue on an all payer basis with global budgets used as one tool for alignment with other providers. Non-hospital initiatives build on common principles and measures.

Population

Focused on the Needs of the Community: Community needs known and addressed.

Supporting Social Needs: Address social determinants of health.

Identifying High-Risk Individuals: Focus on complex patients with high-needs, high-risk, and individuals with chronic disease.

Patient

Engaged: Responsibility for prevention and self-management of health; active relationship with PCP and coordination team.

Working with a Primary Provider/Team: PCP, specialists, nurse practitioners

Receiving Meaningful Care Coordination: Consistent and coordinated support based on individual need.
